Organization Mission

Improve health status of community through curative, preventive and promotive health measures.

To give quality medical treatment to patients from all economic and social status.

To promote sustainable practices of health measures in community through awareness campaigns and outreach clinics.

To promote and support government health objectives related to child, maternity and elderly citizens.

Organization Description

Manamohan Memorial Community Hospital (MMCH) is only community based hospital in Southern Region of Kathmandu District. With great support of local government, community people, social workers, I/NGOs, this hospital has been developed up to 15 bedded hospital from its prior stage of road side clinic. The road side weekly clinic was envisioned to develop into a health center by the community people in which was upgraded according to its plan.

MMCH is dedicated to the people's health of southern belt of Kathmandu. It is working to provide high quality, affordable and accessible health care to each and every patient of this region. The dedicated social workers team of this locality got success to establish as a hospital. This is a self governing community based organization developing gradually as a model with great support of all concerned organization, people and government agencies. MMCH is accessible to all patients, despite of social status or income levels. Our affordable medical services, outreach clinics, weekly specialist's camps and charities are helping the needy people of our working area.

Population Served

Annually, this hospital is serving more than 1,00,000 population from Dakshinkali Municipality, Northern Rural Municipalities of Makwanpur and few Villages from Lalitpur District as well. Pharping community has been a growing city where the above districts' people come for different services as a headquarter. With this regard, our hospital is also taking the people of these areas as its main beneficiaries. Therefore, it is always planning to extend the services of outreach clinic to all these places which comes as one of the challenge for us.

Project Information

Project Title	Establishment of Oxygen Generation Plant with refill in Manmohan Memorial Community Hospital, Pharping.
Project Location	Pharping, Dakshinkali Municipality, Kathmandu
Total Project Budget	\$ 62,393.16
Grant Request	17521.37
Conversion Rate	117
Project Start Date	June 2021
Project Duration	One Year

Project Summary

The total project budget is 62,393.16 USD. Out of total budget 17,521 USD (Seventeen thousands five hundred twenty-one US dollar) is requested to ANMF. From this fund the necessary oxygen plant with refill will be purchased. The oxygen plant will generate the oxygen to fill the 38 cylinders daily. The oxygen generated will be used at hospital and the surplus oxygen will sale to the community people who need the oxygen for medical purpose at home as well it can sale to the nearby hospitals.

Project goals

- To support Manmohan Memorial Community Hospital by establishing the Medical Oxygen Generation Plant with refill.
- COPD patients can buy the oxygen cylinder and use at home when it is necessary. It makes them very comfortable and no need to pay extra cost in hospital or transportation.
- Many Ambulance are needing refilling of oxygen in short period of time. They can get it from us.
- Manmohan Memorial Community Hospital can have one regular source of income by providing oxygen to other hospitals or home users.

Why project is needed

Nepal is harshly hit by the second wave of the COVID-19. The statistics show that only 2.3% population is fully vaccinated in Nepal. On average, more than 7,000 people are tested positive every day, and hundreds are dying because of a lack of oxygen. Unfortunately, hospitals across Nepal, including Manmohan Memorial Community Hospital is ill-equipped to handle the pandemic. This means that health service recipients will face severe hurdles in case of emergencies. The project is aimed to benefit health service receivers and help to run the hospital smoothly. So we proposed to develop the well equipped COVID ward along with the oxygen plant and refill.
